

GAMA Field Overfly Area

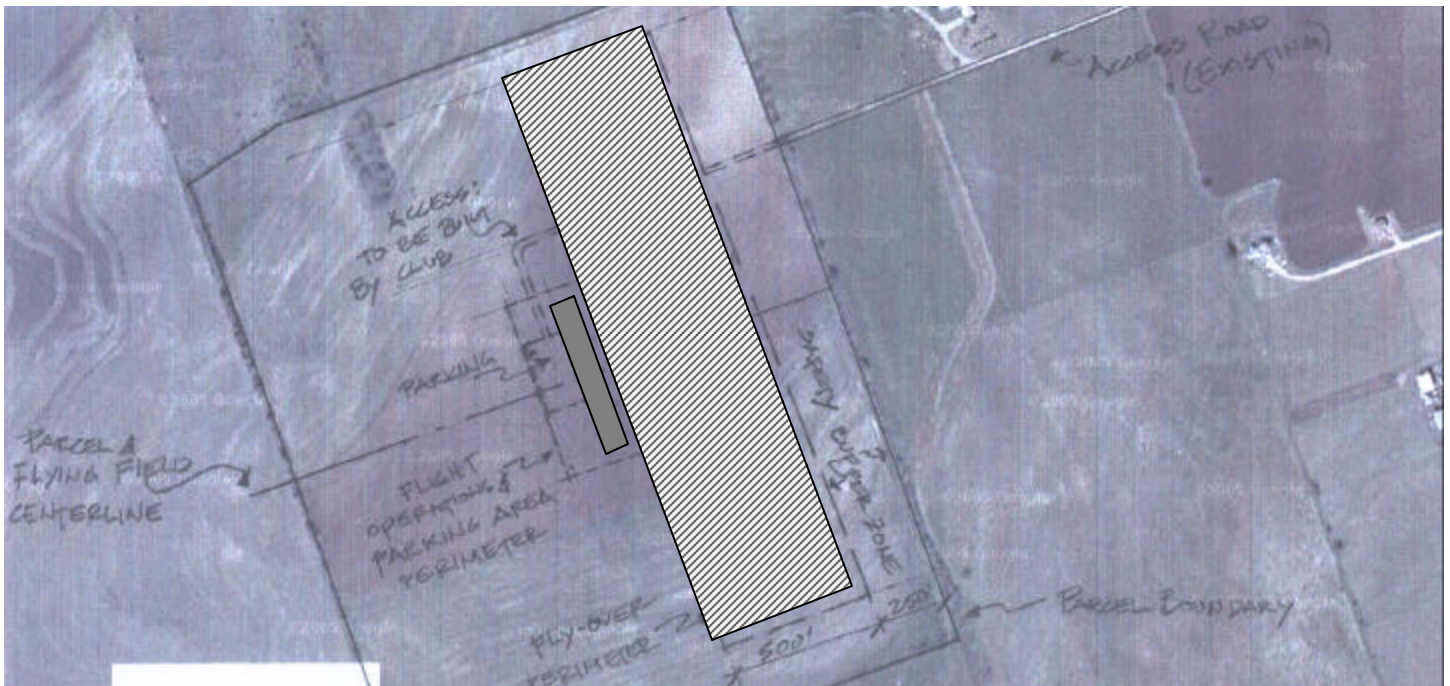

Fellow fliers, welcome!

We have LOTS of room here, but **please keep your flying within the intended boundaries of our field**. They are indicated on the sketch below.

The actual overfly area extends 500 feet to the east of the runway, and 1,000 feet to the north and south.

The easy way to keep track of it is this: **If you're within a couple of hundred feet of the tree lines to the east, north, and south of the field, your airplane is outside of the overfly area.**

Thanks for your attention to this. It's important for us to be good guests and good neighbors at our field. We hope to be welcome here for a long time!

Legend: Gray rectangle is the runway, hatched area is the overfly zone.
